

# Developer Mode of iOS and ideviceinstaller

## Developer Mode

I was once an iOS developer for some time. But my career focus has shifted to other technologies. However, it is still very useful to apply iOS development knowledge even though I am not a professional iOS developer now.

Recently, I wanted to share my installed apps. But if I took screenshots of all apps from the home screen or from the app list in settings, it would be a mess. So I needed to find a way to view all installed apps.

Here are the steps to view all installed apps using Xcode:

1. Connect your iPhone to your Mac via USB
2. Open Xcode
3. Go to Window → Devices and Simulators (or press Shift + Cmd + 2)
4. Select your iPhone from the left sidebar
5. In the main panel, scroll down to the “Installed Apps” section

It has other useful functions:

1. Taking screenshots
2. Opening recent logs
3. Opening the console

## xcrun

```
(base) lzwjava@192 Downloads % xcrun devicectl device info apps --device 00008120-xxxx --verbose
```

Using verbose logging.

```
2024-12-03 16:24:18.579+0800 Enabling developer disk image services.
```

```
2024-12-03 16:24:18.637+0800 Acquired usage assertion.
```

Apps installed:

```
- 0 elements
```

Command Completed, took 0.120 seconds

## ideviceinstaller

```
brew install ideviceinstaller
```

```
ideviceinstaller -l
```

```
(base) lzwjava@192 Downloads % ideviceinstaller -l
```

```
