

## Side Projects

### **Skybound: The Guangzhou to Lhasa Aerial Odyssey**

I embarked on an unforgettable road trip from Guangzhou to Lhasa, a 28-day journey that spanned 8,000 kilometers. Along the way, I used my DJI drone to capture the breathtaking scenery and experiences as we passed through Guangzhou, Kunming, Guangxi, and the awe-inspiring landscapes of Tibet.

### **Building a 2023 Machine Learning Computer**

The project aimed to construct a machine learning-capable computer using up-to-date, budget-friendly components like an Intel Core i9-13900KF CPU, MSI B760M Mortar motherboard, and MSI RTX 4070 GPU. Startup issues were diagnosed and fixed by tightening loose connectors. The project underscored the importance of thorough troubleshooting, cable management for visibility, and ensuring component compatibility, especially among the motherboard, case, and power supply.
