

Pixel' s USB Options

Pixel offers several USB options, and one particularly interesting feature is its ability to function as a webcam. On macOS, QuickTime can access the Android webcam as a video source, providing a simple and effective solution.

To set this up:

1. Navigate to **About Phone** in the settings and tap **Build Number** seven times to enable Developer Mode.
2. Open **Developer Options** and enable **USB Debugging**.
3. Connect your Pixel to your computer via USB and run the following command in a terminal to verify the connection:

```
adb devices
```
