Runway, Replit, and Cohere

Runway

https://runwayml.com

I uploaded a small video to Runway. The platform warns that videos be at least **620x620 pixels** in size.

I uploaded a video with a resolution of **1280x720 pixels**, featuring Apple's "Think Different" ads. Runway provided an option for a **768x1280** resolution output.

To get a **1280x768** output, the video needs to be taller.

Prompt: Make it more colorful

Result:

Your browser does not support the video tag.

Replit

https://replit.com

Replit is an online IDE that allows you to write, run, and host applications directly in the browser. It supports a variety of programming languages and offers collaborative features for real-time coding with others.

Cohere

https://dashboard.cohere.com

Cohere provides large language models (LLMs) that are easy to integrate into applications for tasks such as text generation, summarization, and classification. The platform offers a simple API for accessing its powerful models.
